

The Steele L Utility Die

Innovation and flexibility for utilities and other large products

The L Utility Die can extrude a maximum column size of 5-1/4 x 14-1/4 inches (127mm x 355.6mm)

The L Utility Die offers the innovation and flexibility of the L Die, with a design that produces utility brick and extrusion profiles up to 14" (356mm). Front bridge replacement permits fast changes and adjustments during operation. Mid-base and shaper cap options extrude a range of low-moisture raw materials and products. The bridge features a high carbide coating, for a service life four to five times longer than competitive designs.

Steele offers complete die solutions, including dies, bridges, coring, column trimmers and lubrication systems for solids, pavers and various coring patterns.

Contact us at **800.278.3353** for delivery.

- Bridge replaces from front/adjusts during operation
- Carbide coating on bridge for unmatched durability
- Optional liners for longer wear
- No leaks — less oil usage
- No grease gun needed

Complete die accessories

- Complete die lubrication systems
 - Die lube manifold
 - V-1 die oiling system
 - V-2 die oiling system
- Column balance frames
- Column wire or blade trimmer frames
- Tungsten carbide frog plates (scoring plates)

Better lubrication and easier operation

Steele L Utility Die

Research and development in wear resistant materials

Steele focuses on ways to improve durability and extend the service life of our die products. We now offer innovations such as:

- > Ceramic lined shaper caps
- > Tungsten carbide scoring plates
- > Vanadium tool steel liner plates
- > Silicon carbide core tips

We also handle specific customer requests for material selection and engineering.
